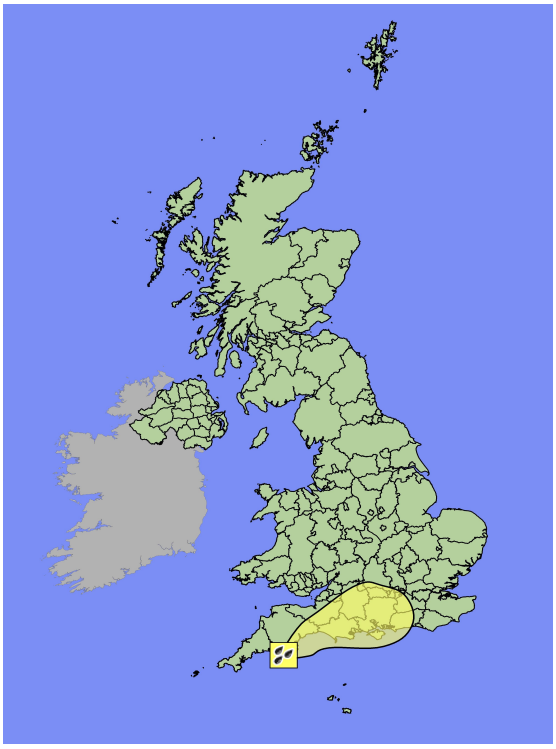
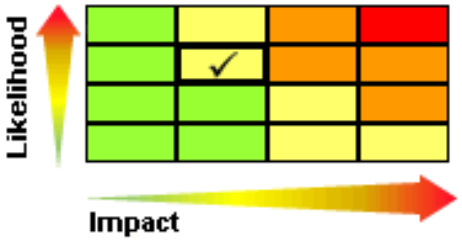
National Severe Weather Warning Service





Chief Forecasters Assessment
Both the heavy rain overnight and the heavy showers during Friday have the potential to produce rainfall totals of 30 to 40 mm very locally in a period of a few hours, though in the vast majority of places amounts are expected to be less than this.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **01:00 on Fri, 04th Nov 2011** until **17:00 on Fri, 04th Nov 2011**

An area of heavy and possibly thundery rain will move north across the more central parts of southern England and southeast England during the early hours of Friday. Meanwhile, slow moving, heavy and locally thundery showers are expected to develop more widely during Friday. The public should be aware that as a result of the heavy rain there could be some surface water flooding, leading to local travel disruption.
